## THERE IS NO COST TO ILLINOIS RHCs

POND is a web-based data collection, reporting and benchmarking application for rural providers including rural health clinics, community health centers, health system satellite practices, and free-standing clinics. POND is designed to fill a critical gap in actionable and comparative practice level data that can be used by rural primary and specialty care provider entities seeking to optimize clinic financial performance, compensation and productivity.

POND is live and ready to be used and practices can start enrolling into POND immediately at <https://pond.lilypad207.com>. Once a practice is set up, they can enter data and generate benchmark analyses. It will take no more than 20 minutes (per year) for a clinic to complete the information. Clinics will then be able to run regional benchmark reports with this information.
