

# Addressing the Challenges of the Discharge Medication Reconciliation Process

**WEBINAR: Thursday, July 1<sup>st</sup> 2021, 1 pm CST**

**TARGET AUDIENCE:** Pharmacists, Nurse Leaders, Quality Leaders

The collection of a complete, verified medication history is essential to the process of medication reconciliation and the prevention of unintentional medication discrepancies, both upon admission and discharge. This webinar will examine the critical steps in medication reconciliation, with a focus on the discharge process. ISMP staff will review the ICAHN survey results to identify challenges faced by member organizations and talk about strategies to improve the reliability of the discharge medication reconciliation process.

**OBJECTIVES:**

- Review the key components in the medication reconciliation process as a way to improve medication safety
- Analyze ICAHN survey results and challenges faced by member organizations during discharge medication reconciliation
- Discuss successful organizational practices that enhance the reliability of the discharge medication reconciliation process

## FEATURED SPEAKER

**Matthew Grissinger RPh, FISMP,**

**FASCP,** is the Director of Error

Reporting Programs at the

Institute for Safe Medication

Practices (ISMP). His

responsibilities include working

with healthcare practitioners

and institutions to provide

education about medication

errors and their prevention. He

also reviews medication errors

that have been voluntarily

submitted by practitioners to

ISMP's Error Reporting Program. He has published

numerous articles in the pharmacy literature,

including regular columns in P&T and is a journal

reviewer for a number of publications.
